

Our blades are the finest ever to be made of this type. They are ground by a master of his craft, our former knife maker, Bali-Song custom cutter and blade designer, Les de Ass. The standards which others can only hope to duplicate. He has many years of experience beginning with his early association with the pioneer knife maker, John Nelson. Current day's work also includes the Canon Sword, wielded by Arnold Schwarzenegger in "Conan," as well as MIRA film, a Tiro Documentalis production.

Each knife features one noninterchangeable blade of your choice (1-7).

1. Utility — General purpose blade

2. Drop Point — Whirling and field clearing

3. Bowie — Our version of the old cowboy cutting blade

4. Mariner — Nautical Blade

5. Stiletto — Self Defense — primarily a thrusting blade shape

6. Modified Stiletto — Variation of classic Stiletto — partial coverage

7. Wee Hawk — The ultimate in Survival — Urban Defense

Les de Ass, President of Bali-Song Inc. continues to meet the challenge of building the best knife available for the world's discriminating buyers.

## The Challenge

## The Accomplishment

Overall Length — 9 inches open, 4 1/2 inches closed  
Blade — 3/16 inch cutting edge

"One of the best and most dramatic knives I have ever owned. I have given martial arts demonstrations with all sorts of knives, but the Bali-Song opening techniques add a whole new dimension to the usual twists, turns, and spins." David E. Steele, weapons expert and staff writer for Soldier of Fortune, Guns, Knife World and Combat Illustrated.

Timeless Beauty

Today's Most  
Dramatic  
Folding Knife

Swing the twin revolving handles away from the hollow-ground blade and experience machined precision as they lock into a strong, uncompromising unit. The functional beauty of this classic design allows us to realize the most from today's technology.

#### Long Ago . . .

In a primeval land of lush tropical beauty, a land of a proud people living in a harsh environment, a legend was born. This ancient Filipino legend recalls the story of one warrior, known in the Filipino martial art named after the god of war, Kali, who dispatched 29 enemies with a folding knife. This knife was the forerunner of today's Bali-Song, also referred to by native Filipinos as the "Ventinueve" which means 29. We are proud to be the only manufacturer of the Bali-Song knife. Bali-Song Inc. puts high technology to work to bring you the knife you want. This unique and multi-faceted knife offers the ultimate in blade protection and deployment through our revolving twin-handle design. The legend of that original knife leaves little doubt that combined with modern materials and craftsmanship, the Bali-Song is today's most dependable and durable folding knife. The Legend lives on . . .

#### The Standard of Strength and Beauty

No maker of fine knives is more aware of the varied and demanding requirements placed on their products than Bali-Song Inc. From the discriminating collector who places a premium on the overall beauty of fine fit, finish and workmanship; to the outdoorsman who's primary concerns are function and dependability; to the martial arts enthusiast who appreciates the physical blend of design, balance, and response in the never ending quest for perfection of form.

#### Without Compromise

Each of our Bali-Songs represents a custom hand-made knife sparing no expense — with no compromise in its development and production. We precision machine solid brass or stainless steel handles, and painstakingly hand fit the beautiful inlay of your choice. We also offer a skeletonized handle of stainless steel, brass, or aluminum for the ultimate in total function. We are the only custom knife company in the world using 154cm stainless steel exclusively in our blades. Crucible 154cm is a hardenable chromium steel to which molybdenum has been added to improve the hot-hardness and corrosion characteristics. It has the highest attainable hardness of the corrosion and heat resisting grades. In order to utilize the exceptional edge-holding capability of this steel, we use heat treating methods developed and used by the aerospace industry. Our blades are heat treated in a vacuum furnace to minimize contamination, then sub-zero quenched resulting in a blade tough enough to hold an edge without being brittle.

#### Our Unique Features Include:

- Completely hand-ground satin finish 154cm stainless steel blade, 3/16" thick, heat treated to a Rockwell hardness of 59-61 on the C scale.
- Electro-chemical etched logo to prevent stress points in blade, unlike ordinary stamping.
- Integral handles machined from solid stock to exacting specifications provide the maximum in strength, blade protection and easy cleaning.
- Insert materials: Micarta® a high pressure phenolic resin laminate, which will not crack, chip, fade, or shrink. Exotic woods, stone, and other natural materials available upon request.

- Our three-point locking system incorporates two fully machined stainless steel pivot pins and tang pin, resulting in the strongest folding knife available in today's market.

#### In a word, Prestige

We've reintroduced quality to the knife making industry. Made loyal friends among collectors and experts in the field. From all of this, two things should be clear. First, because of its precision construction and high quality, the Bali-Song is not an easy knife to build. We simply are incapable of making it in great quantities. Second, the Bali-Song is not inexpensive. Since quality in today's market is elusive, we know it's worth. You'll agree.
