OUTDOOR/SURVIVAL

The awesome 15-inch long BUSHMASTER™ is the first production jungle knife that combines classic design and high-tech construction. It is practical in all environments from steaming jungles to frozen arctic tundra. The 10-inch blade has been designed to actually cut while chopping. This engineered shape clears a path like a machete and cuts kindling like a hatchet. From defense to shelter building all tasks become easier. The BUSHMASTER™ is equally at home in the back of a 4x4 or attached to a military combat harness.

The DELTA ATTACK 1™ combat knife is a light, quick defensive tool that is extremely efficient and easy to carry. The reverse curve blade shape has been designed to make cutting almost effortless. The non slip kraton handle has been specially engineered to fit comfortably in virtually any size hand. The feel and balance of the DELTA ATTACK 1™ make it the ultimate combat knife in its class.

The BUSHMASTER™ and the DELTA ATTACK 1™ are both equipped with all weather sheaths made from a special space-age polymer by Dupont®.

The MONARCH II series survival folders are the perfect "MULTI-PURPOSE" companion folding knives in any rugged outdoor setting. These knives are the "STRONGEST LOCKBACK FOLDERS" on the market today. The MONARCHS have massively constructed blades and locks that will not fail. The lock has been positioned so that it is virtually impossible to unlock accidentally in "HIGH STRESS" situations. The kraton-like rubber slab handles are absolutely non-slip in all weather conditions. The blades have been designed to conform to most laws on length of blades for pocket carry.* The dynamic folders are strong, compact, efficient, and READY IN A FLASH.

UNCOMPROMISING IN ALL SITUATIONS

BARRY WOOD FOLDING KNIVES

The innovative rotary handle folders that have only been available on a custom-made basis are now offered in a production version at a fraction of the cost. The design and engineering skills of famed custom knifemaker Barry B. Wood have again, as in the past, set new standards of excellence. This dynamic new folder is your perfect choice for all uses. The Pacific Cutlery production models are the most precision made folding knives commercially available. Manufacturing tolerances are held to within 2 ten thousandths of an inch to insure positive, dependable function. There is no substitute for quality or accuracy. This unique knife will perform all of your daily cutting tasks and last a lifetime.

We at PACIFIC CUTLERY have based our reputation on HIGH QUALITY specialized knives that are unmatched by any other commercial manufacturer. We pioneered with the "WORLD'S STRONGEST FOLDING KNIVES" (the custom Bali-Songs); we have now developed the "WORLD'S STRONGEST FOLDING LOCKBACK KNIVES" (the Monarch Series) and the "WORLD'S STRONGEST ROTARY LOCK FOLDING KNIVES" (the Wood folders). In this tradition all of our new knives are WORLD CLASS CHAMPIONS in their respective categories. This strong commitment to quality since 1979 is the major reason for our success. We feel that quality must be inherent in both design and manufacture to ensure that a product will perform well and be durable. Over the past few years we have found that the most reliable way to guarantee quality is to do as much of the direct manufacturing in our own facility as possible. Our commitment to quality has enabled us to more than quadruple our in-house manufacturing capability. We have invested in the finest equipment available to enable us to produce the highest quality and most consistent knives available at a reasonable price. All of our products are manufactured either directly by us or under strict supervision by our own manufacturing personnel in facilities overseas. We will not accept anything that is substandard and neither will you. There is no substitute for quality, AND WE'RE NOT STOPPING HERE. Employing extensive research and development and utilizing rigorous testing methods, we are constantly exploring new design ideas and materials for increased performance and value. This has led to more efficient blade shapes which have greater cutting ability with less effort (the Bushmaster and Delta Attack 1); human engineered handles which lessen hand and wrist fatigue; and sheaths made from space-age synthetics for improved protection of the blade and user. PACIFIC CUTLERY will continue to make only the best.

COMBAT SERIES

These two lightning quick knives have been engineered to meet the needs of the most discriminating military personnel and professional adventurers. The perfect combination of weight and balance gives maximum effectiveness with minimum effort. The handmade full tang construction gives phenomenal strength without needless cumbersome weight. These are knives that you can bet your life on. The **Fer-de-Lance** has been designed by noted author and weapons expert David E. Steele. Its double edged blade thrusts like a dagger yet cuts like a well balanced knife. The handle is shaped to fit almost every hand size regardless of grip style preference. The **Timba** survival knife is equally well balanced and is equipped with ice and wood cutting saw teeth that bite quickly and make short work of many outdoor/survival tasks. The slight reversed curve main cutting edge provides swordlike cutting ability. The Fer-de-Lance and Timba are serious knives for serious jobs. You can wear them with confidence.
