

Spyderco™ 2003

25 YEARS

ANNIVERSARY KNIFE

C76 In celebration of a quarter century of knifemaking, Spyderco is producing a limited edition of our classic Delica Model. Renowned mosaic Damascus steel forger, Ed Schempp designed a bug and web patterned bolster that comes mounted onto a stainless steel handle with honey-colored jig-bone scales. The blade is hollow ground VG-10 in plain edge only. No two knives look exactly alike due to the organic nature of the jig-bone and the variance of the hand-forged bug pattern. Each knife is presented in its own engraved Cocobolo rosewood case lined in luxurious black fabric.

NEW!

C76 Anniversary Knife	
Blade Steel	VG-10
Edge Type	P
Weight	3.9 oz 110g
Length Blade	2 15/16" 74mm
Length Overall	6 13/16" 174mm

POLICE MODEL

C07 Since 1984 the Police Model has been one of Spyderco's cornerstone models. A favorite of law enforcement everywhere, as much blade length as possible comes packaged in a slim stainless steel handle. The hollow-ground VG-10 blade features the David Boye dent in the locking lever, minimizing the possibility of releasing the lock while gripping the knife tightly.

Weight	5.5 oz 155g
Length Blade	4 1/8" 104mm
Length Overall	9 7/16" 240mm

HARPY

CO8 Designed in 1987 for the marine industry, the Harpy's hawkbill blade shape is all about efficiency. The curved arc of the blade keeps the material you are cutting from slipping off the tip of the blade and SpyderEdge serrations eat through rope, line, webbing or netting. The David Boye dent in the locking lever allows a tight grip without releasing the lock.

CO8 Harpy

Blade Steel VG-10
Edge Type S
Weight 3.75 oz 106g
Length Blade 2 3/4" 70mm
Length Overall 6 1/2" 165mm

MERLIN

CO8BK The Merlin was added to the Spyderco line-up in 1993 as a lightweight alternative to the award-winning hawkbilled Harpy. The FRN textured handle has a reversible ambidextrous clip.

CO8BK Merlin

Blade Steel VG-10
Edge Type S
Weight 2.5 oz 71g
Length Blade 2 7/8" 73mm
Length Overall 6 7/16" 164mm

SPYDERHAWK

C77 The new C77 SpyderHawk is a larger version of the Merlin. The super-sized hawkbill blade allows you to reach out, grab line, rope and/or webbing for pulling cuts toward you. The blade is VG-10 and the black FRN volcano grip handle has an ambidextrous black metal pocket clip for a tip up carry.

Length Overall.....	8 1/2" 216mm

ENDURA

C10BK Since its debut in 1990 the Endura has been the preferred everyday-carry work knife for a myriad of "Serve and Save" and other hands-on professionals. The blade is flat ground VG-10, the handle is FRN with a volcano grip and an ambidextrous black metal clip, and the locking lever has David Boye's dent.

Weight.....4 oz 110g
Length Blade.....2 7/8" 72mm
Length Overall.....6 13/16" 173mm

DELICA

CIIBK In 1990 the Delica lightweight set the standard for light-weight pocketknives. It's big enough for full-scale cutting jobs yet small enough not to raise eyebrows. The VG-10 blade is available in three configurations (serrated, plain and 50/50); the handle is black FRN with slip-resistant volcano grip texturing and an ambidextrous metal clip. Topped off with the David Boye dent, the Delica is one of Spyderco's top sellers.

Rescue 93mm

C14 Our new Rescue the 93mm has a sheepfoot VG-10 blade. The crescent-shaped indent on the spine provides a "control spot" for the index finger. We've also: enlarged the round hole, added texturing for thumb purchase, included a prominent finger choil and added the David Boye locking lever dent. The FRN handle comes in indigo blue (one inch of plain edge at the blade's tip) or in black or safety orange (fully serrated). It has an ambidextrous pocket clip.

NEW AND IMPROVED!

Spyderco Online

We invite you to visit our web site at www.Spyderco.com. Check out the Recent News section for information on new products, press releases and monthly features. The Edge-U-Cation section offers a variety of knife related information including history about Spyderco.

Spyderco Forums

Spyderco hosts two public forums, one at Bladeforums.com as well as one on our web site. Both are open forums for end-line-users to exchange their knowledge, opinions and experiences of/with Spyderco knives and sharpeners as well as other related topics. Within the general forum on our site there are three sub forums: a General Knife Discussion area, a Techno Junkies Forum and an MBC section (exclusively for dialog and exchange of martial blade craft practices).

We are committed to ongoing improvements to our web site as well as continuous updates and new information. We invite you to make us one of your "favorite" stops as you travel the Internet.

SPYDERENCH

T01 Spyderco's multi-tool is unlike any other. It features: A full-sized locking knife blade, dual-position slip-joint plier, adjustable 9/16th crescent wrench, four standard screwdriver bits, a long bit that doubles as a three-sided diamond file (concave, convex and flat sharpening surface) and of course a pocket clip. The two halves separate for independent use of the knife/screwdriver and crescent wrench.

TRI-ANGLE SHARPMAKER

204MF The Tri-Angle Sharpener is the most effective and versatile sharpening tool in the world. It comes with fine and medium grit stones in a compact polymer case. Instructional booklet and video included.

24%
FICTITIOUS SIZE

ULTRA-FINE TRIANGLE

204UF Ultra fine ceramic stones for professional, fine finishing.

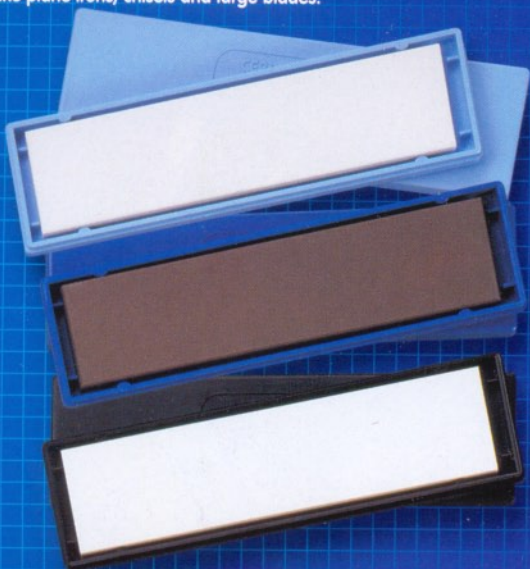

DIAMOND TRIANGLE

204D Diamond Triangles for re-shaping, rebeveling and stock removal.

BENCH STONES

302 Available in fine, medium and ultra-fine. Our 302 bench stones are flat and broad and highly effective for honing wide tools like plane irons, chisels and large blades.

POCKET STONES

303 Portable and versatile, Spyderco offers a variety of small pocket stones for field use and for honing small items. Each stone is sold separately and is packaged in a leather carrying case.

CERAMIC FILES

400F One of each (fine-grit only): round, square, triangular and slip, sold as a set packaged in a suede pouch. Also available individually, packaged in a plastic tube.

PROFILE

702 A half-sized version of the 701 Profile. Only 4-inches long they're easily carried in a coat pocket or backpack. Medium and fine grit stones are sold individually or as a pair encased in split leather.

Spyderco's philosophy is simple. From our smallest Ladybug to our large Military model, Spyderco consistently delivers reliable high performance. Period.

THE ROUND HOLE

The Spyderco Trademark Round Hole™ is a symbol of quality but also adds an important function: One-hand opening. Settle your thumb over the hole and open the knife blade by applying pressure. Your thumb pad rotates for enhanced control and fluid opening. One hand operation allows you to open your knife, make the cut, close the folder and replace it in your pocket. This works even when hands are wet, oily or gloved.

THE SPYDERCO CLIPIT

The term CLIPIT applies to all Spyderco knives with a pocket clip, about 75% of our product line. We were the first company to install clothing clips on our knives in 1981. The rest of the knife industry followed suit. The clip securely attaches the knife inside the edge of your pocket near-at-hand for quick and simple retrieval. You can also "clip it" to a handbag, use it as a money clip or attach it to outdoor gear and attire.

WHY THE SPYDEREDGE?

Spyderco is synonymous with serrations because ours work as intended. Most others don't. Our serration pattern features one large curve followed by two small curves, we call a SpyderEdge™. Serrations actually increase the amount of overall cutting edge length. The teeth initiate the cut letting the sharpened curved recesses continue cutting after the teeth penetrate. Since the tips of the teeth do the hard work, the inside curves stay sharp longer. This translates into enhanced cutting power and long lasting edge retention. Serrations work well on aggressive cutting chores like cardboard, rope, webbing and fibrous material. Fine or intricate cutting jobs, like whittling and caping, often call for a PlainEdge™ blade. This is why we offer models in either a fully SpyderEdge™ or PlainEdge™ configuration and many in a combination of both.

SPYDERCO TECHNO-JUNKIES

Quality and innovation are Spyderco's highest priority. Our R&D lab researchers sink years of testing and engineering into each model. To maintain our high quality standards (and continually raise the bar) we test, retest and compile technical data on blade steels, lock system strength, and high performance materials. Blade steels: Our steels are subjected to hardness, corrosion and edge retention studies. Lock Strength: Every Spyderco model meets and (often surpasses) our set standards for lock strength. High Performance Materials: Advances in technology offer the knife industry limitless materials to enhance performance. We test new manufacturing techniques and materials that offer superior longevity, chemical resistance, lightweight strength and visual appeal.

WARRANTY & REPAIR

When you purchase a Spyderco knife you are buying twenty-five years experience in manufacturing quality products. If properly cared for your knife will last a lifetime (this does not include abuse, misuse, loss or theft). If you experience problems with any function of your CLIPIT, we want to know. Please call, email or write us at:

820 Spyderco Way
Golden, CO 80403

We're available to answer your questions Monday through Friday from 8:00-5:00 Mountain Standard Time.

WHERE'S IT FROM?

Spyderco manufactures knives in our Golden, Colorado plant and in several premier facilities in Seki City, Japan and Taiwan. Our Golden site is growing. Its close proximity to the R&D team allows development, testing and the manufacture of high performance products in one place, in less time. Whether the model you choose is manufactured in Golden, Seki City or Taiwan it meets Spyderco's level of quality craftsmanship and elite performance.

CUSTOM KNIFE DESIGNS

Owning custom made knives has long been an exclusive luxury. Handmade pieces carry the personality and innovation of the maker. They also carry the price tag. In 1990 we joined forces with a prominent custom knifemaker. The rest is history. By uniting custom designs with Spyderco features we offer new advances to the cutlery industry. It's the best of both worlds.
